CONTENTS

Volume III. No. 2 November, 1911

The "Monnier Mosaic" . . . . . Frontispiece

The Coming Sale of Part II of the Robert Hoe Library 35

A cursive account, in untechnical language, of the principal items of interest in the coming sale of the second part of the library of the late Robert Hoe; chiefly the missals and incunabula; including Caxton's edition of the "Canterbury Tales," being the fourth or fifth book printed in England; with an illustration of a remarkable binding, known as the "Monnier Mosaic."

A Novel Phase of Musical Development 44

The building of large residences has made possible the development of the so-called chamber organ into an instrument of the same size as the large church organ, but possessing certain special qualities of its own, which are authoritatively described here. Great refinement of tone and complete silence of mechanism are its distinguishing characteristics.

An Exhibition of American Colonial Plate . . . 52

Considerable old plate survives in this country from Colonial days. Much of it is church plate. A good collection of this, together with several cabinets of domestic Colonial plate, made by early New York silversmiths, is on loan exhibition in the Metropolitan Museum of Art.

Some Notes on Bookbinding 57

Being random notes, rather than a set article, on certain desirable qualities to be sought for in the binding of a book. The opinion is advanced that the English and American binders do the "forwarding"—the actual work of binding—better than the French, who, however, excel as decorators. But most cherished of the bibliophile is a good binding that is contemporary with the book.
